

SnakeCatcher Mobile App

Pythons'R'Us

Due: 12/1/17

Working Prototype Known Problems Report

Function:

1. Camera/Recording
 - a. The code runs but crashes the app, no camera or recording works
 - b. System failure
2. Motion detection
 - a. The code is there and the start/end button works for the first attempt because after that it saves that motion was detected and displays that text instead of the default text
 - b. But it indicates that the phone moves even without us doing anything, which could be a emulator problem or our code
3. RecyclerView
 - a. Populates but is not clickable as we did not implement a separate View to show the video (since we didn't get the recording to work)
4. UI
 - a. Issues with the clickability of the bottom navigation items
 - i. It sometimes defaults to the first icon "motion" instead of the icon that is clicked
